Demo: Globoticket

Setting up and running the sample application

Understanding Classes

Class: Event

Properties:

- date
- title
- venue

Methods:

- cancel()
- reschedule()

Class Instantiation

title:

Container
Enthusiasm

title:

Digital
Cowboys

Creating and Instantiating Classes

event.class.ts

```
class Event {  
  date: Date;  
  title: string;  
}
```

index.ts

```
const event = new Event();  
event.title = 'Digital Cowboys';
```

Class Methods

event.class.ts

```
class Event {  
  title: string;  
  
  setTitle(t: string): void {  
    this.title = t;  
  }  
}
```

index.ts

```
const event = new Event();  
event.setTitle('Digital Cowboys');
```

Class Constructor

event.class.ts

```
class Event {  
  title: string;  
  
  constructor(t: string) {  
    this.title = t;  
  }  
}
```

index.ts

```
const event =  
  new Event('Digital Cowboys');
```

Overloading Constructors

event.class.ts

```
class Event {  
  title: string;  
  date: Date;  
  
  constructor(t: string);  
  constructor(d: Date, t: string);  
  constructor(td: string | Date, t: string = '') {  
    // ...  
  }  
}
```

Parameter Properties

event.class.ts

```
class Event {  
  constructor(public title: string) {  
  }  
}
```

index.ts

```
const event =  
  new Event('Digital Cowboys');  
  
console.log(event.title);
```
