Standard Function Declaration

```
function fn(p1: string, p2: number): string {  
    return `${p1} ${p2}`;  
}
```

Function Expressions

```
const f = function fn(p1: string, p2: number): string {  
    return `${p1} ${p2}`;  
}
```

Function With Explicit Type

This arrow means return type

```
const f: (string, number) => string = function fn(p1: string, p2: number): string {  
    return `${p1} ${p2}`;  
}
```

Arrow Functions and Function Type Expressions

This arrow starts the arrow function body

```
const f: (string, number) => string = (p1: string, p2: number): string => {  
  return `${p1} ${p2}`;  
}
```

This colon starts the return type of the arrow function

Define Return Type With :

Normal Function Declaration

Function Expression

Arrow Function

Define Return Type With =>

Function Type Expression

Optionals

```
function fn(p1: type_name, p2?: type_name): type_name { }
```

Marks the value as optional
